

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

Claims 1-23 (Canceled).

24. (Currently amended) A computer ~~having thereon~~ system comprising:
a processing unit; and
a memory;
the processing unit executing first code defining a first process operating on the
computer ~~comprising code to be executed in connection therewith,~~ the first code executing on
the processing unit implementing including at least one triggering device;
the memory holding a digital license corresponding to the first process, the license
setting forth terms and conditions for operating the first process; and
the processing unit executing second code defining a second process operating on the
computer for proxy-executing code corresponding to each triggering device of the first
process on behalf of such first process, the second process including a license evaluator for
evaluating the license to determine whether the first process is to be operated in accordance
with the terms and conditions set forth in such license, the second process choosing whether
to in fact proxy-execute the code corresponding to each triggering device of the first process
on behalf of such first process based at least in part on whether the license evaluator has
determined that the first process is to be operated in accordance with the terms and conditions
of the license, whereby the first process is dependent upon the second process for operation
thereof.

25. (Previously presented) The computer of claim 24 wherein the first process is an
application and the second process a rights client.

26. (Previously presented) The computer of claim 24 further comprising a table
available to the second process, the table including the code corresponding to each triggering
device of the first process and an address of the triggering device in the first process.

27. (Previously presented) The computer of claim 26 wherein the table is set forth in the license.

28. (Previously presented) The computer of claim 27 wherein the code corresponding to each triggering device of the first process is encrypted within the table and is decryptable according to a decryption key obtainable by the second process.

29. (Previously presented) The computer of claim 28 wherein the license includes the decryption key encrypted in a manner decryptable by the second process.

30. (Previously presented) A method in combination with a computer having a first process operating thereon and comprising code to be executed in connection therewith, the code including at least one triggering device, and a table including a code section corresponding to each triggering device of the first process and an address of the triggering device in the first process, the method for a second process operating on the computer to proxy-execute code corresponding to each triggering device of the first process on behalf of such first process, the method comprising:

- the second process monitoring for when the first process executes a triggering device thereof;

- the first process executing a triggering device and halting;

- the second process noting the triggering device being executed by the first process and responding thereto by:

- determining an address of the triggering device within the first process;

- locating in the table the code section corresponding to the triggering device based on the determined address;

- proxy-executing the located code section on behalf of the first process; and

- signaling to the first process that the triggering device has been dealt with; and

- the first process then resuming, whereby the first process is dependent upon the second process for operation thereof.

31. (Previously presented) The method of claim 30 wherein the computer further includes a digital license corresponding to the first process, the license setting forth terms and conditions for operating the first process, the method further comprising the second process evaluating the license and verifying that the first process is operating in accordance with the terms and conditions set forth in such license prior to proxy-executing the located code section on behalf of the first process.

32. (Previously presented) The method of claim 30 wherein the located code section is encrypted, the method further comprising the second process decrypting the located code section before proxy-executing same.

33. (Previously presented) The method of claim 30 wherein each triggering device is a particular exception and comprising the second process monitoring for when the first process executes the particular exception.

34. (Previously presented) The method of claim 33 further comprising the second process attaching to the first process so as to monitor the first process for the particular exception directly.

35. (Previously presented) The method of claim 30 wherein each triggering device is one of a plurality of types of exceptions and comprising the second process monitoring for when the first process executes any of the types of exceptions, the second process responding to each type of exception in a differing manner.

36. (Previously presented) The method of claim 30 wherein the computer further includes a digital license corresponding to the first process, the license setting forth terms and conditions for operating the first process, and wherein the second process proxy-executing the located code section on behalf of the first process comprises the second process securely retrieving a term or condition from the license and employing same on behalf of the first process.
